SMARTENGINEERING SPA has a new position:

Software Engineer - Lombardia

Currently, we are looking for a Software Engineer with experience in cloud development. The resource will be involved in an innovative project related to the development and design of cloud-native solutions, which exploit modern technologies in the field of humanoid robotics.

Main responsibilities:

Create cloud-native solutions that make best use of container-based and serverless environments running in cloud and on edge.

Design and implementation of products features for our robots.

Assess existing applications and recommend appropriate technical treatments to migrate to cloud-native platforms.

Main requirements:

Proficiency in Python and OOP.

Experience in Microservices design and development

Experience with Cloud development and deployment tools (Kubernetes, Docker, KubeEdge)

Familiar with LINUX based systems

Familiar with CI/CD and version control tools (git)

Nice to have:

Experience with messaging queue protocols (MQTT/AMQP/Apache Kafka ...)

Experience with Web Development technologies (Django, Tornado, ...)

Programming experience with front-end frameworks and technologies (JavaScript, TypeScript)

We can offer solid opportunities for professional growth, thank's to our Academy and training on the job.

We believe that people can really make the difference, especially we trust in smart and young engineers, with strong passion for innovation and humanoid robotics.

If you are interested in the position above, apply now sending your cv to sara.nicoli@sengineering.it and take this opportunity for your future.

Thank's for your attention and good luck!
